

Shared Login & "Logged by" Attribution

Some accounts in the system are shared by more than one person on a team. This guide explains the short extra step you'll see when signing in to one of those accounts, and why records now show exactly who did what.

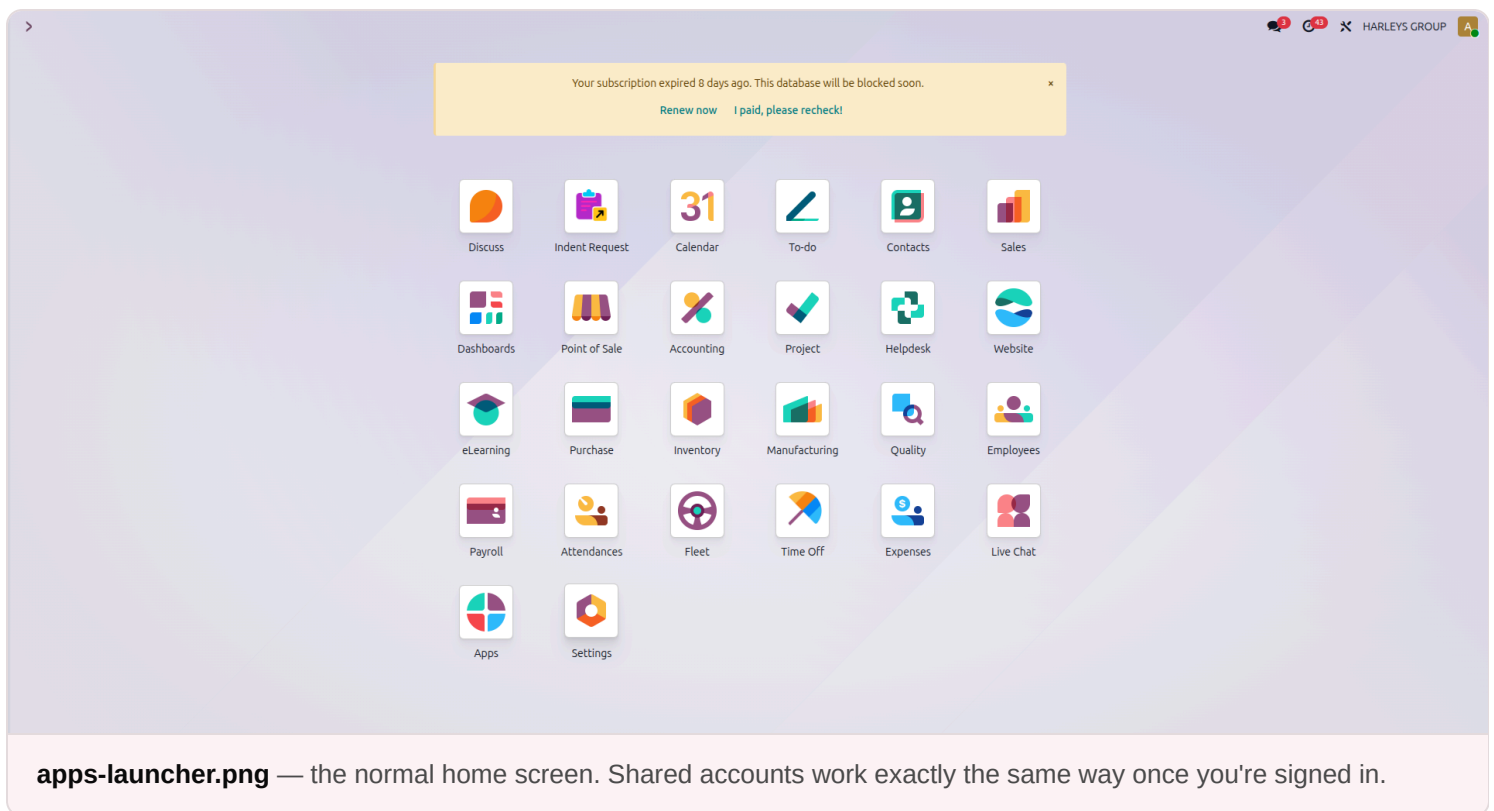

Audience Employees and managers using shared accounts **Reading time** ~5 minutes

6. Common questions

1. What is a shared account?

Some roles are handed off between people over the course of a day or a shift — for example, a **Supply Chain Planner** account that whoever is on shift signs in to, rather than each person having a separate login for that role. That's a **shared (functional) account**: one login, used by more than one person depending on who's working, inside the same application employees already use every day.

The challenge with a shared account on its own is that every record it touches — a Purchase Order, an Indent Request, an update to an existing record — used to only show the shared account's name, never the person who was actually doing the work. This system closes that gap: it asks whoever signs in to a shared account to confirm who they are, and then tags every action they take with their own name automatically.

2. Signing in to a shared account

Nothing changes about how you normally sign in. You'll notice a difference only if the account you're using has been marked as shared:

1. Sign in as usual with that account's own username and password.
2. Because the account is shared, you'll land on a second screen: **Confirm your identity**.
3. Enter *your own* personal login — the same one you already use elsewhere in the system for things like your employee self-service. This is not a new password to remember.
4. Once it's accepted, you're taken into the system as normal, working from the shared account exactly as before.

IF YOU USE A PERSONAL, NON-SHARED ACCOUNT

You will never see this extra step. It only appears for accounts a manager has specifically marked as shared. See it in action in §5 below.

3. Why you'll see "Logged by <your name>"

From the moment you confirm your identity, anything you create or change while signed in — Purchase Orders, Indent Requests, status updates, notes, and more — is automatically tagged with your name in the activity log (the "chatter") on that record. You don't need to do anything for this to happen; it's automatic for the rest of your session.

This means that even though several people may use the same account across a day, a manager (or you) can always look at a record's history and see exactly who did what and when — the shared account's name no longer hides that.

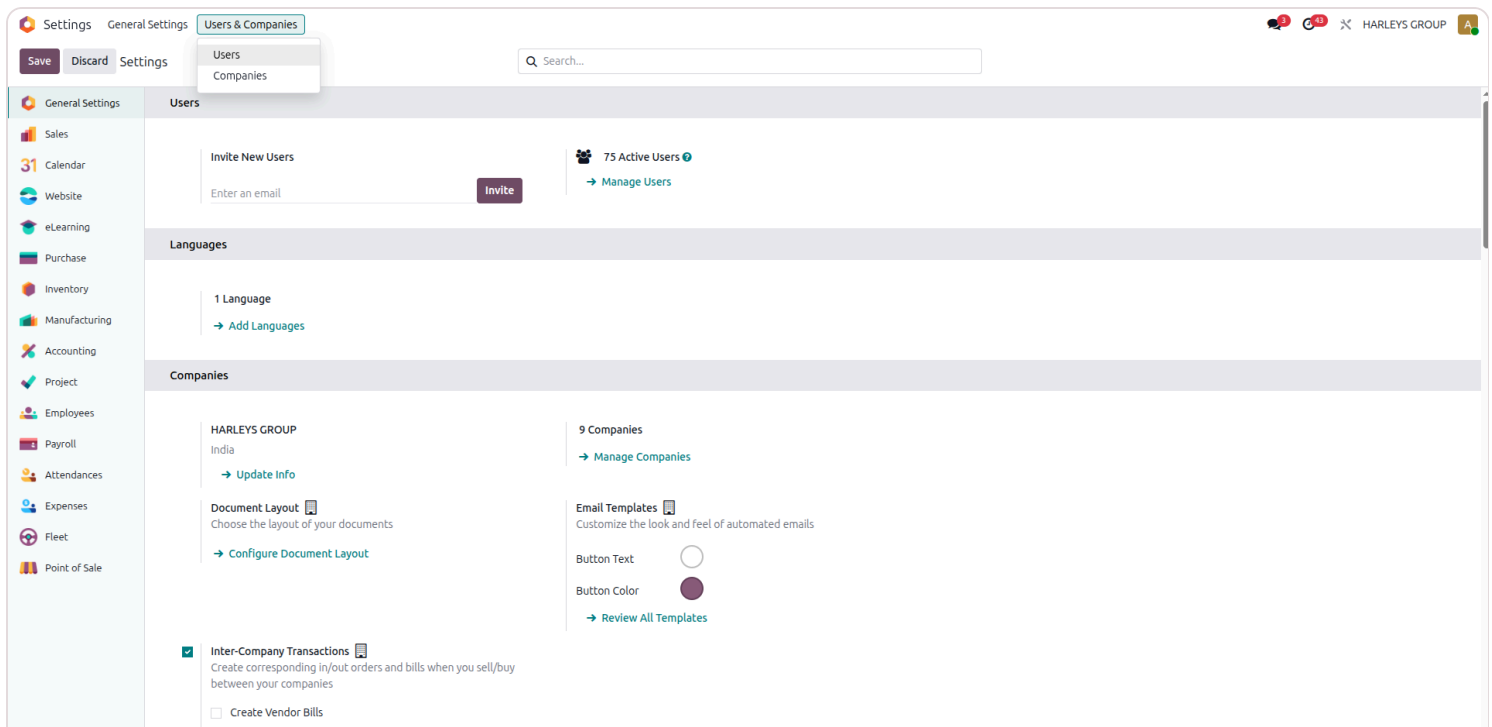

For some record types, IT can also switch on deeper logging — so changes and deletions get attributed too, not just the message you'd normally see. That's a per-record-type setting IT controls; you don't need to do anything differently either way.

4. For managers: setting up a shared account

If you have administration access, you can mark any account as shared. Each step below is matched to the screen you'll see.

1 Open Users & Companies

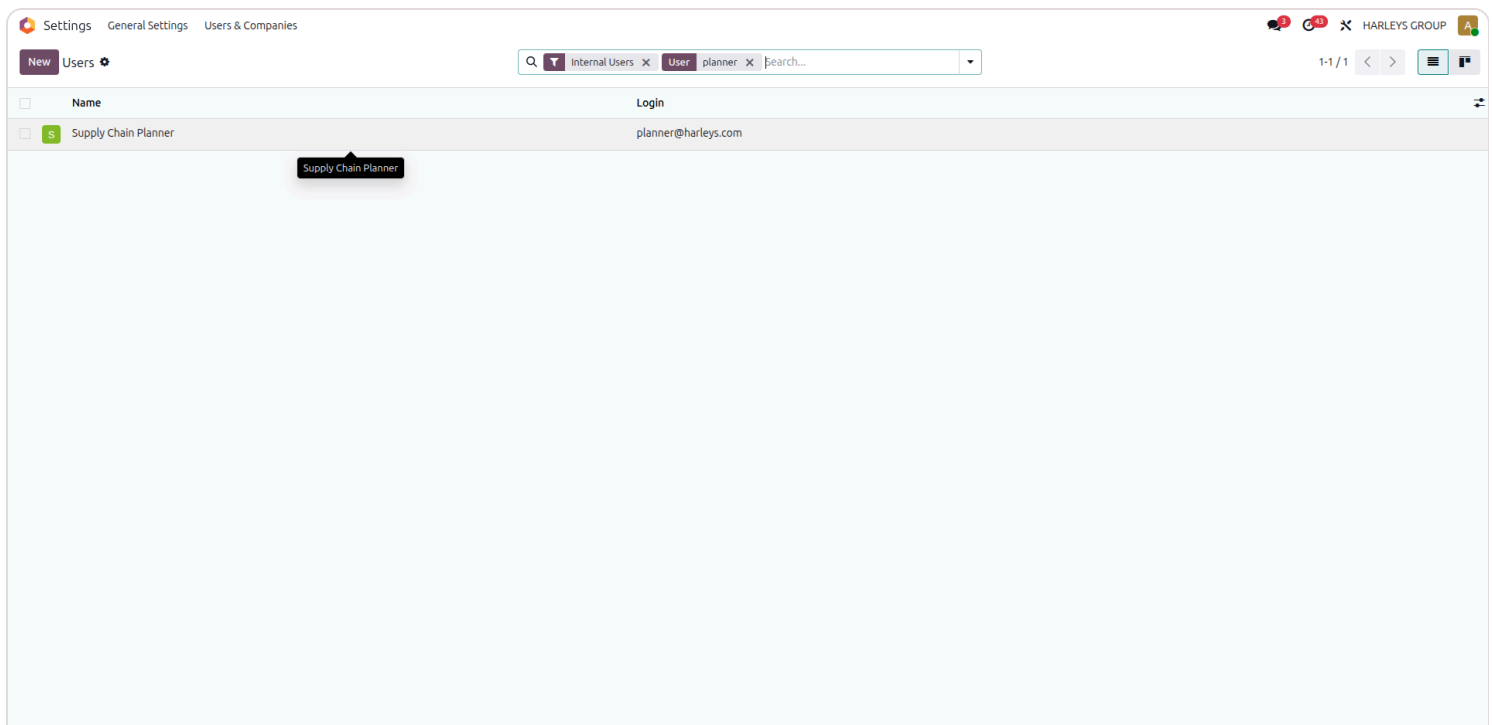

Go to **Settings** → **Users & Companies** → **Users**.

settings-users-menu.png — from General Settings, open Users & Companies → Users.

2 Open the account

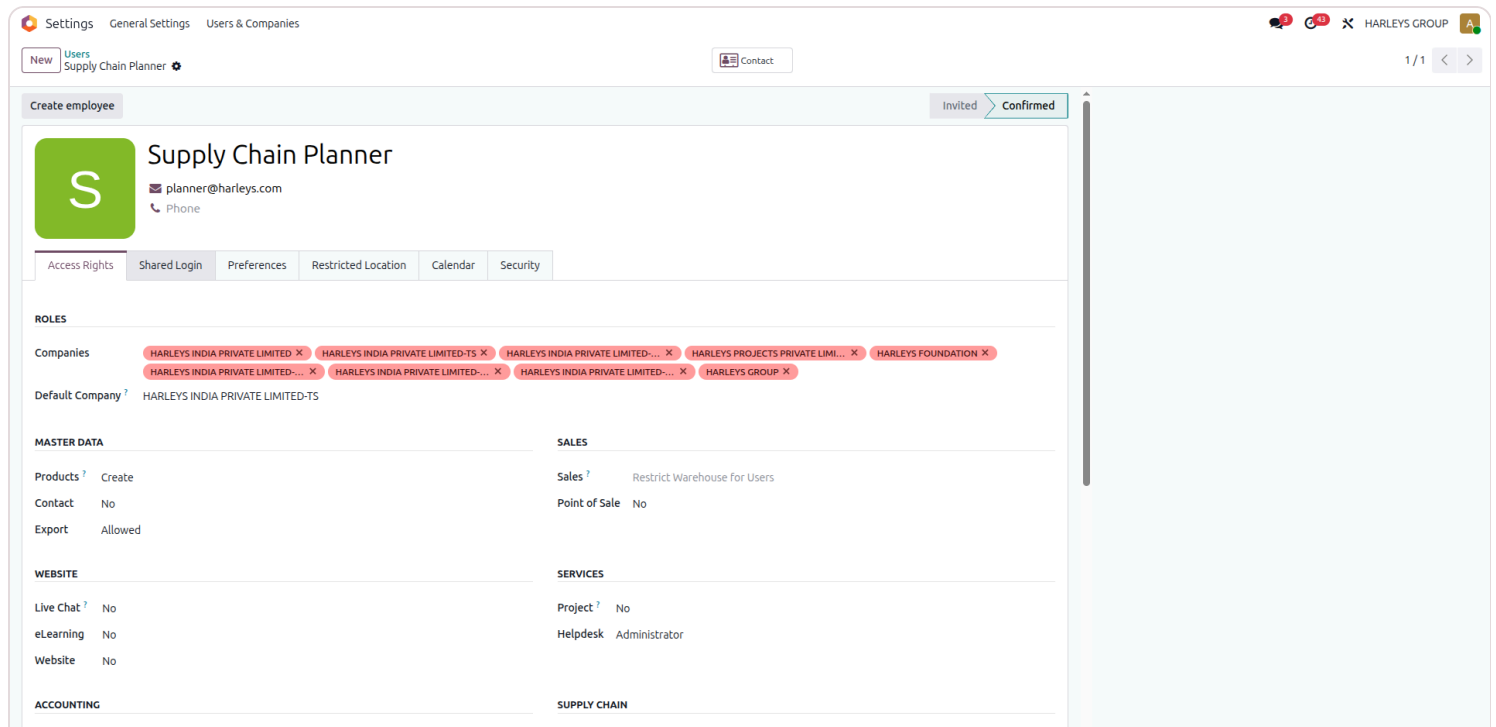

Find the account (search by name, e.g. "planner") and open its record.

users-list-planner.png

3 Open the Shared Login tab

On the user's record, switch to the **Shared Login** tab, next to Access Rights and Preferences.

The screenshot shows the 'Supply Chain Planner' user record in the 'Shared Login' tab. The user's profile includes a green 'S' icon, email 'planner@harleys.com', and a 'Phone' field. The 'Shared Login' tab is active, showing a 'Create employee' button and 'Invited' and 'Confirmed' status buttons. Below the profile, there are tabs for 'Access Rights', 'Shared Login', 'Preferences', 'Restricted Location', 'Calendar', and 'Security'. The 'Shared Login' tab is selected, displaying a list of companies with red 'X' icons, a 'Default Company' dropdown, and sections for 'MASTER DATA', 'SALES', 'WEBSITE', 'SERVICES', and 'ACCOUNTING'.

Shared / Functional Login ☐

shared-login-tab-off.png — before the change: nothing is enabled yet.

4 Check "Shared / Functional Login"

The screenshot shows the 'Create employee' form for 'Supply Chain Planner'. The 'Shared / Functional Login' tab is selected, and the checkbox is checked. The 'Authorized Employees' field is empty. A dropdown menu is open, showing a list of organizations. The 'Switch to HARLEYS INDIA PRIVATE LIMITED-TS' option is highlighted.

shared-login-tab-on.png — once checked, an **Authorized Employees** field appears. Left empty, it defaults to "any employee with a valid employee login."

5 Optionally restrict who can use it

To limit the account to specific people, add them under **Authorized Employees**:

6 Save

There's nothing else to configure — the change takes effect immediately, no restart needed. The **Shared Login** tab itself is only visible to users with administration access, so team members can't turn it on or off themselves.

5. What it looks like in practice

A full round trip: one shared account, used by two different employees back to back, each correctly identified on their own actions.

1 First employee signs in with the shared account

The screenshot shows a web application interface with a dark blue header containing links for 'Home', 'Courses', and 'Tickets', and a 'Sign in' button. The main content area is white and features a login form. The form has an 'Email' field with the text 'planner@harleys.com' and a 'Choose a user' link. Below it is a 'Password' field with a 'Reset Password' link. A yellow 'Log in' button is present, with a link 'Log in as superuser' below it. A separator '- or -' is followed by a 'Use a Passkey' button. The footer of the page is a light pink bar with the text 'login-planner.png — no different from any other sign-in.'

2 They confirm their identity

The screenshot shows a web application interface with a dark blue header containing links for 'Home', 'Courses', and 'Tickets', and a 'Sign in' button. The main content area is white and features a confirmation form. The form has a title 'Confirm your identity' and a message: 'Supply Chain Planner is a shared account. Enter your own employee login to confirm who is working this session.' Below this is an 'Employee Login' field with the text 'kvineethreddy.cy@gmail.com'. Below that is an 'Employee Password' field with a masked password '.....'. A yellow 'Confirm identity' button is present, with a 'Cancel' link below it. The footer of the page is a light pink bar with the text 'confirm-identity-employee-1.png — appears only because this account is shared.'

3 They do their work as normal

The screenshot shows the 'Indent Request' form in Odoo. The form is for 'IND08781' and is in the 'Draft' state. It includes fields for 'Indent Number', 'Indent Template', 'Date', 'Operation Type', 'Via Operation Type', 'Delivery From', 'Delivery Via', 'Delivery To', 'Company', 'Internal Transfer Status', and 'Manufacturing Orders'. The 'Products' section is expanded, showing a list of products with columns for 'Product', 'Product Category', 'UoM', and 'Demand'.

Product	Product Category	UoM	Demand
[734] MQ ALMOND NUTS	RAWMATERIAL / DRY FRUITS AND NUTS	KGS	1.00000
[479] MQ PISTA NUTS	RAWMATERIAL / DRY FRUITS AND NUTS	KGS	1.00000
[502] MQ HAZELNUT KERNAL	RAWMATERIAL / DRY FRUITS AND NUTS	KGS	1.00000
[676] NUTELLA HAZELNUT SPREAD	RAWMATERIAL / CHOCOLATES COFFEE AND SPREADS	KGS	1.00000
[441] 2M DARK COMPOUND CP16	RAWMATERIAL / CHOCOLATES COFFEE AND SPREADS	KGS	1.00000

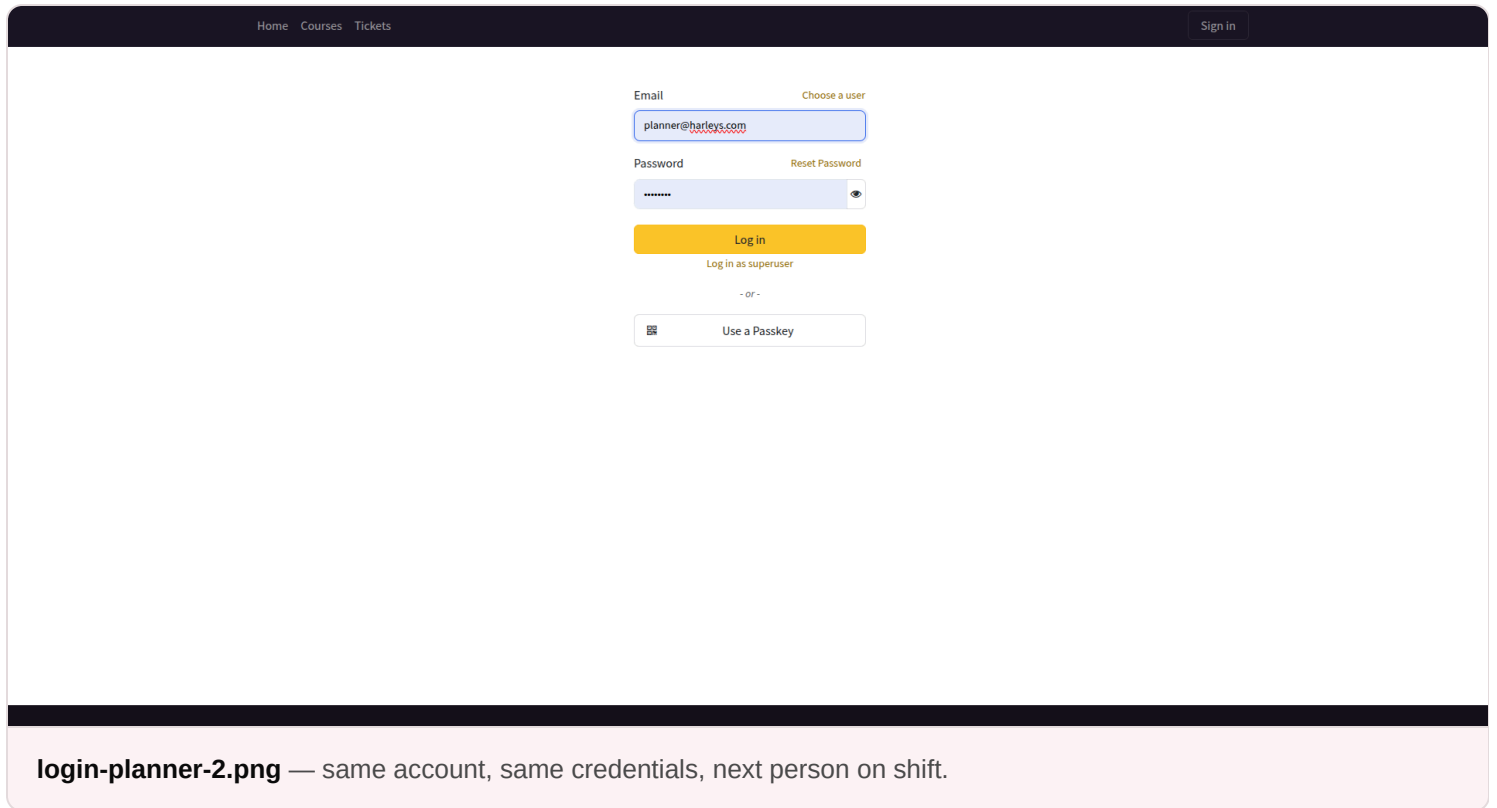

indent-created-tagged.png — the record's activity log shows who actually created it.

4 They log out at the end of their shift

The screenshot shows the Odoo dashboard with various app icons arranged in a grid. The icons include 'Discuss', 'Indent Request', 'Calendar', 'To-do', 'Dashboards', 'Helpdesk', 'Website', 'Purchase', 'Inventory', 'Manufacturing', 'Quality', 'Employees', 'Time Off', 'Expenses', and 'Apps'. A user menu is open in the top right corner, showing options like 'Help', 'Shortcuts', 'Online', 'My Preferences', 'My Odoo.com Account', 'Install App', and 'Log out'.

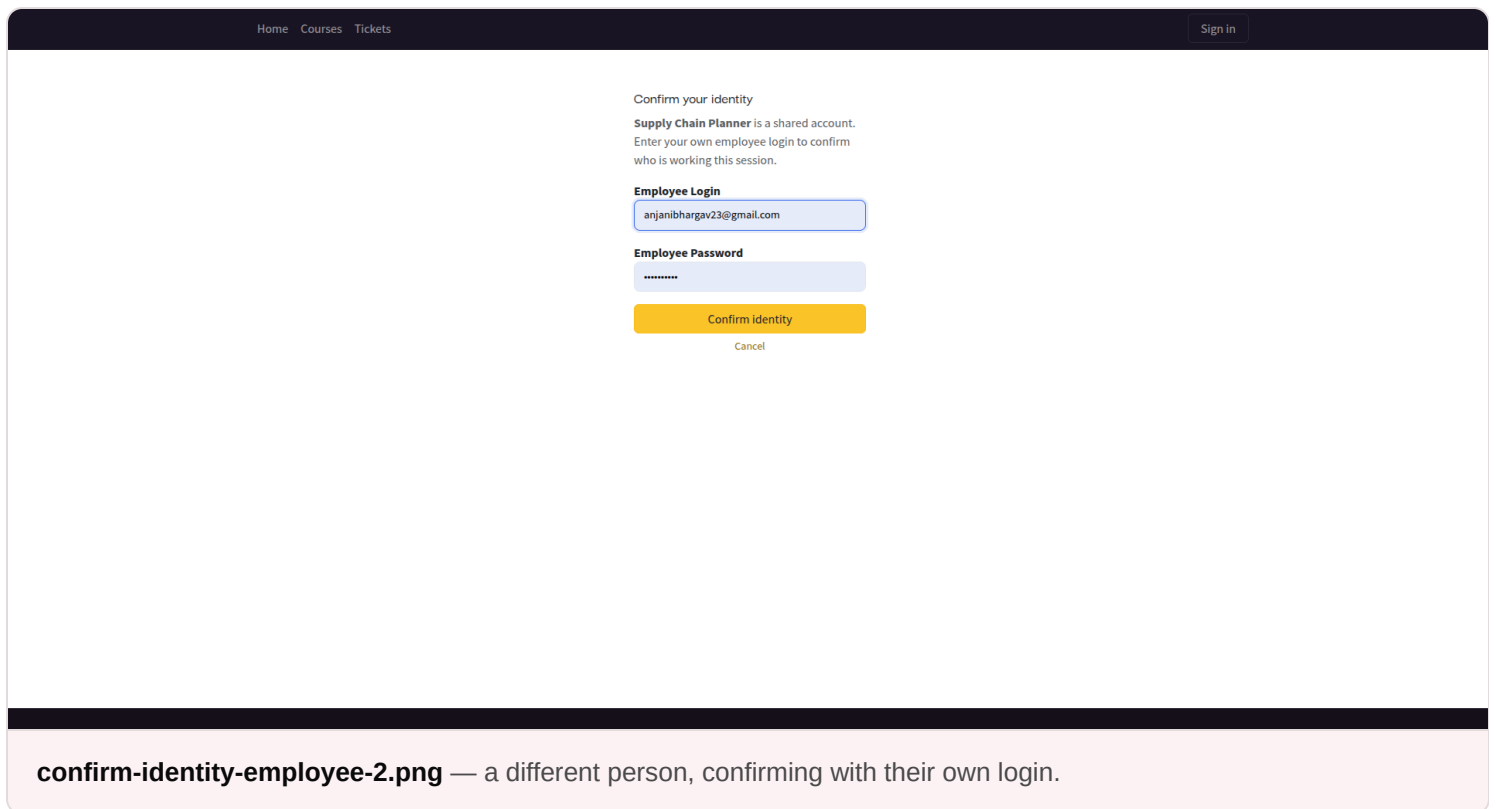

logout-menu.png — a normal sign-out. The shared account is now free for the next person.

5 The next employee signs in with the same shared account

The screenshot shows a web application interface with a dark blue header containing links for Home, Courses, and Tickets, and a Sign in button. The main content area is white and features a login form. The form has two input fields: Email (with the value planner@harleys.com) and Password (with masked characters). Above the Email field is a link 'Choose a user' and above the Password field is a link 'Reset Password'. Below the Password field is a yellow 'Log in' button. Underneath the button is the text 'Log in as superuser'. Below this is a separator '- or -'. At the bottom of the form is a button with a QR code icon and the text 'Use a Passkey'.

login-planner-2.png — same account, same credentials, next person on shift.

The screenshot shows a web application interface with a dark blue header containing links for Home, Courses, and Tickets, and a Sign in button. The main content area is white and features a confirmation page. The page has the heading 'Confirm your identity' and a message: 'Supply Chain Planner is a shared account. Enter your own employee login to confirm who is working this session.' Below this is a form with two input fields: Employee Login (with the value anjanibhargav23@gmail.com) and Employee Password (with masked characters). Below the password field is a yellow 'Confirm identity' button. Underneath the button is a 'Cancel' link.

confirm-identity-employee-2.png — a different person, confirming with their own login.

indent-status-change-tagged.png — two different people, sharing one account, each show up correctly for their own action on the same record.

6. Common questions

WHAT IF MY NAME DOESN'T SHOW UP CORRECTLY?

The main record itself will always show the correct name. Line items and similar sub-records only show it once IT has switched on deeper logging for that record type — if you spot one that hasn't, flag it to IT rather than assuming something's broken.

WHAT HAPPENS IF A RECORD IS DELETED?

Deletions are logged too. For records with no natural place to show it, the deletion is kept in a separate administration log instead, so it's never lost.

DOES THIS CREATE A NEW PASSWORD I HAVE TO REMEMBER?

No. You use your existing personal login — the same one you already use for self-service — nothing new to set up.

WILL THIS SLOW DOWN MY SIGN-IN EVERY TIME?

It's a single extra screen shown once per sign-in session on a shared account, not on every action you take afterward.
